NIORI Cheat Sheet

v0.1.0 · Emacs 29.1+ · SQLite · GPL-3.0-or-later
personal medical records, offline

Type `M-x niori` *to open the dashboard and enable every key below; the* `C-c M` *prefix then works in every buffer. Text size:* `C-=` / `C-+` *larger,* `C--` *smaller.*

START & NAVIGATE

`M-x niori`	open the dashboard, enable all keys
`C-c M d`	dashboard
`C-c M m/v/t/c`	medications / visits / lab tests / vaccinations
`C-c M ?`	transient command menu
`C-c M C-h`	every binding, listed
`C-= / C-+`	text larger
`C--`	text smaller
`C-x C-0 0`	reset text size

NEW RECORDS

`C-c M a m/v/t/c`	new medication / visit / lab test / vaccination

FORMS

`C-c C-c`	save
`C-c C-k`	cancel

DOCUMENTS

the buffer from C-c M f

`RET`	open
`f`	open externally
`o`	show folder in Dired
`r`	retitle
`d`	detach *(asks first)*

ROSTERS

`RET`	open record
`a`	add
`e`	edit
`d`	delete *(asks first)*
`g`	refresh
`S`	sort *(clicking a header sorts too)*
`D`	diff vs. previous revision
`L`	compose letter *(visits)*
`E`	export menu

DETAIL VIEWS

`e`	edit
`d`	delete
`D`	diff vs. revision
`L`	compose letter
`A`	attach document
`E`	export menu

GOOD TO KNOW

Every change is snapshotted — D diffs it.

Deleting a record keeps its documents.

Attachments are copied; originals stay put.

EXPORT & BACKUP

`C-c M E o` export Org · `C-c M E c` export CSV · `C-c M E j` export FHIR R4 JSON

`C-u C-c M E o` encrypted Org *(EasyPG)* · `C-c M b` timestamped backup

FROM THE COMMAND LINE — M-X

`niori-dashboard`
open the dashboard

`niori-store-backup`
back up the database

`niori-store-secure-data-directory`
tighten data-directory permissions

`niori-store-switch-data-directory`
move the installation

`niori-attachments-check`
find missing & orphaned documents

`niori-attachments-purge-orphans`
remove orphaned documents

`niori-fhir-export`
FHIR R4 bundle of a module

`niori-fhir-fetch`
retrieve from a FHIR server (auth-source)

One directory holds the whole record — ~/.local/share/niori ($NIORI_DATA_DIR overrides). Copying or syncing that folder backs up everything: database, documents, exports. Nothing leaves this machine unless the FHIR client runs.

niori.el 0.1.0
